Research in sustainability and Circular Economy from engineering

José Ángel Peña
[\(jap@unizar.es\)](mailto:jap@unizar.es)

November 26th, 2021

I3A of the University of Zaragoza

Universidad
Zaragoza

Placed at Campus Río Ebro (Zaragoza) next to the Engineering and Architecture Faculty (EINA)

OUR OBJECTIVES:

- The promotion of **scientific research** related to diverse fields of engineering.
- Contribute to economic development by **technology transfer** to the industrial sector.
- Support of high qualification **education**, at postgraduate and doctoral level.
- The **dissemination** of science and technology in society.

Research divisions

Research structured into 4 strategic research divisions

ICT Division

Technologies for the knowledge society

Industrial Technologies Division

Technologies for the factories of the future

Processes & Recycling Division

Engineering to improve the environment

Biomedical Engineering Division

Engineering techniques for the improvement of health

UCCSRI

Processes & Recycling research areas

Processes & Recycling Division

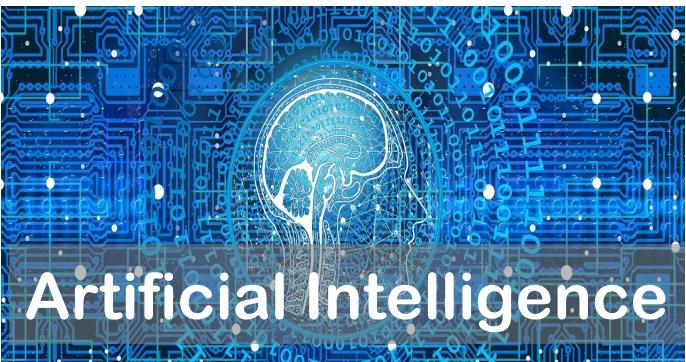

Engineering to improve the environment

Leitmotivs

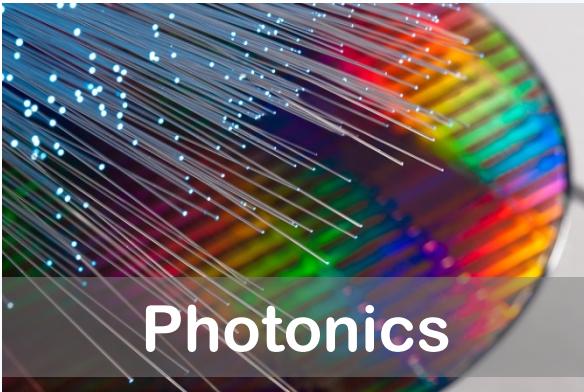

- ▶ Energy and environment
- ▶ Hydrogen technologies
- ▶ Recycling and waste valorization
- ▶ Packaging, food quality and safety
- ▶ Agro-food technologies

Circular Economy Lab

Cutting-edge Labs

Artificial Intelligence

Photonics

Home Appliance Technologies

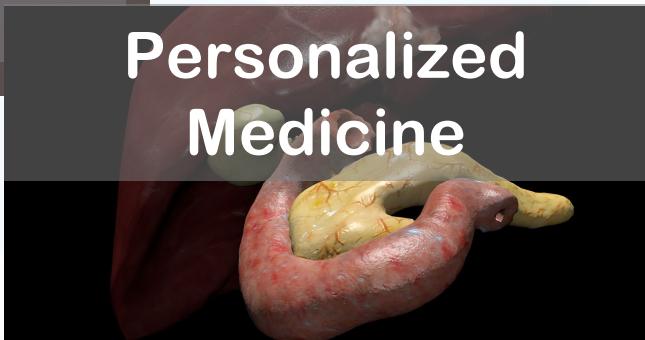

Circular Economy

Industry 4.0

Personalized Medicine

Smart Cities

Virtual & Augmented Reality

Circular Economy Lab

Since 2020

**Circular
Economy Lab**

Topics

- **Energy and Environment**
 - *Sustainable Thermal Systems*
 - *Thermal Energy Efficiency*
- **Hydrogen Technologies**
 - *Hydrogen as energy vector*
 - *e-Fuels: Power to Gas & Power to Liquids*
- **Recycling and waste valorization**
 - *Biogas upgrading/exploitation*
 - *Biofuels from wastes (liquid, solid and gas)...*
- **Packaging, food quality and safety**
 - *Active packaging from renewable sources*
- **Agro & food technologies**
 - *Green chemistry from agro*

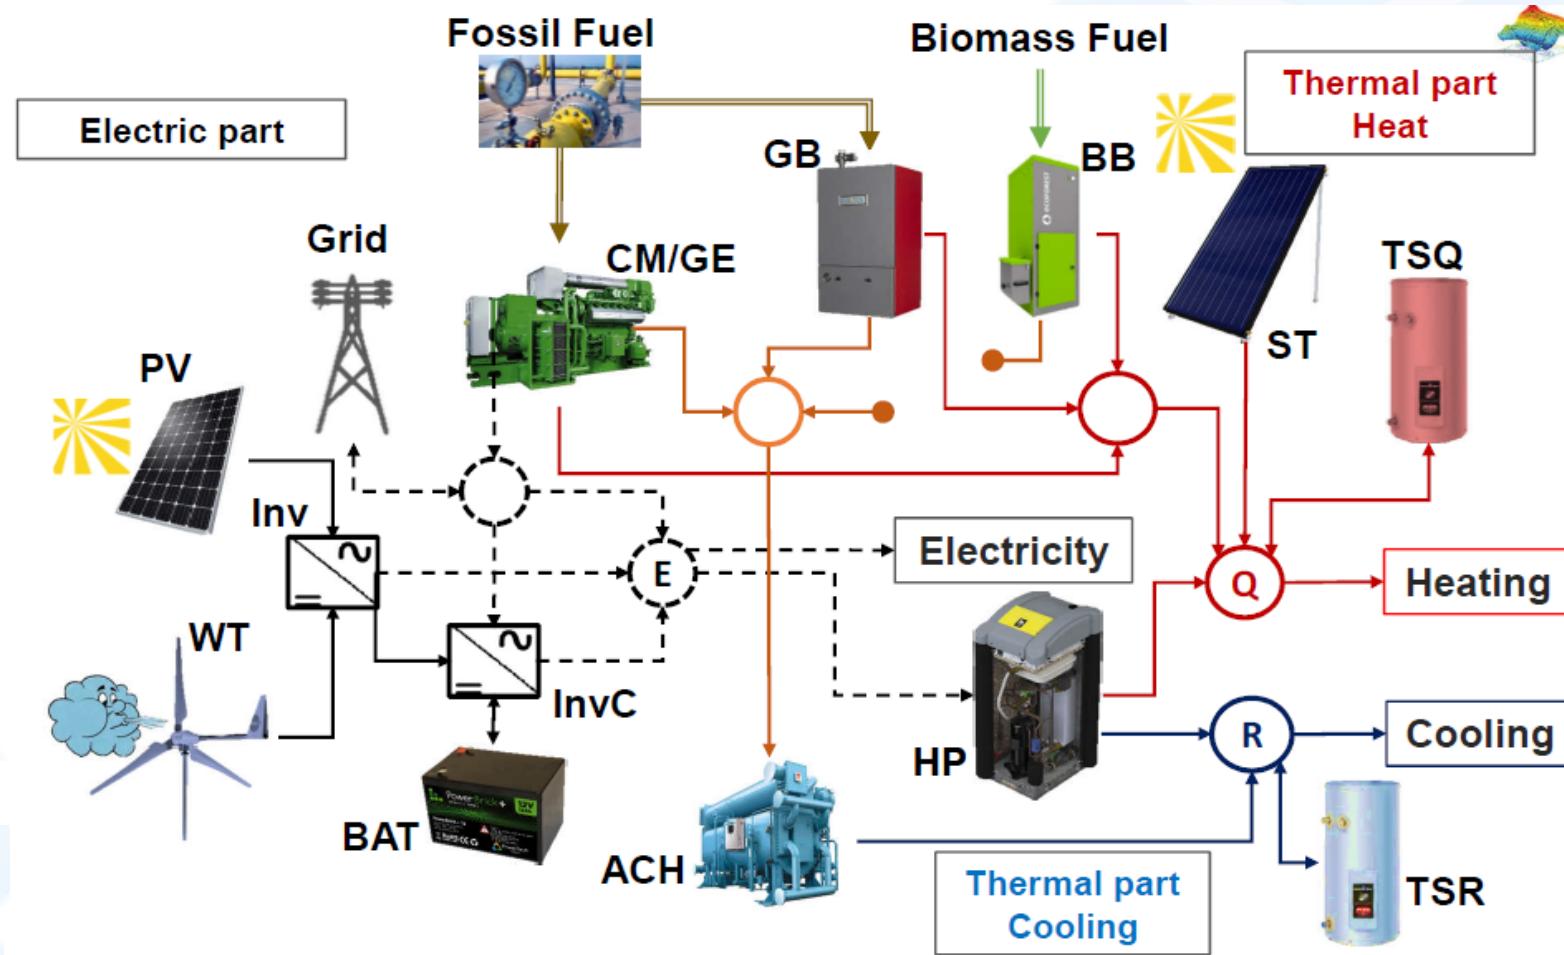

Circular Economy Lab

Image: European Parliament

- **Key enabling technologies (KETs)**
 - *Internet of things (IoT)*
 - *Geospatial infrastructures, Agro-logistics*

Universidad Zaragoza

Biofuels from wastes (II)

Technologies

PYROLYSIS

GASIFICATION

AQUEOUS PHASE
REFORMING

COMBUSTION

- Fast pyrolysis
- Catalytic pyrolysis

BIO-OIL

- Fuel
- Value-added product recovery
- Aqueous phase → use as fertilizer (phytotoxicity tests)
- HDO of bio-oil → BioJet fuel

Raw materials

- ✓ Meat and bone meal
- ✓ Sewage sludge
- ✓ Manure / Digestate
- ✓ Wood chips
- ✓ Tetrapack

Fluidized bed

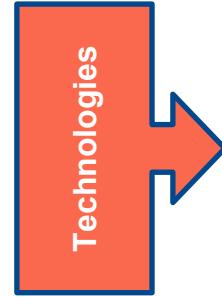

Auger

Fixed bed

Biofuels from wastes (III)

- Slow pyrolysis (carbonization)

BIO-CHAR

- High specific surface
- Retains moisture
- Carbon fixation
- Improves soil performance

Fluidized bed

Auger

Fixed bed

Raw materials

- ✓ Meat and bone meal
- ✓ Sewage sludge
- ✓ Manure / Digestate
- ✓ Agricultural residues:
banana rachis, cocoa,
cashew nutshell, olive mill
waste, vine shoots

Biofuels from wastes (IV)

THERMO-CHEMICAL CONVERSION

Technologies

PYROLYSIS

GASIFICATION

AQUEOUS PHASE
REFORMING

COMBUSTION

Raw materials

- ✓ Wood chips
- ✓ Meat and bone meal
- ✓ Sewage sludge
- ✓ Manure / Digestate
- ✓ Black liquor
- ✓ RDF / MSW

- Gas-to-energy or syngas (FT)
- Gas cleaning
- NH₃ production

Fluidized bed (Lab scale)

SAICA
PAPER | NATUR | PACK

GAS

Pilot plants (BFB)

urbaser

Demonstration plant (BFB)

Cadagua

Commercial plant (Down draft)

TAIMWESER

Biofuels from wastes (V)

Technologies

PYROLYSIS

GASIFICATION

TRANS-ESTERIFICATION

COMBUSTION

Raw materials

- ✓ Frying processes wastes
- ✓ Animal fats
- ✓ Non edible crops...

- Glycerol (byproduct)

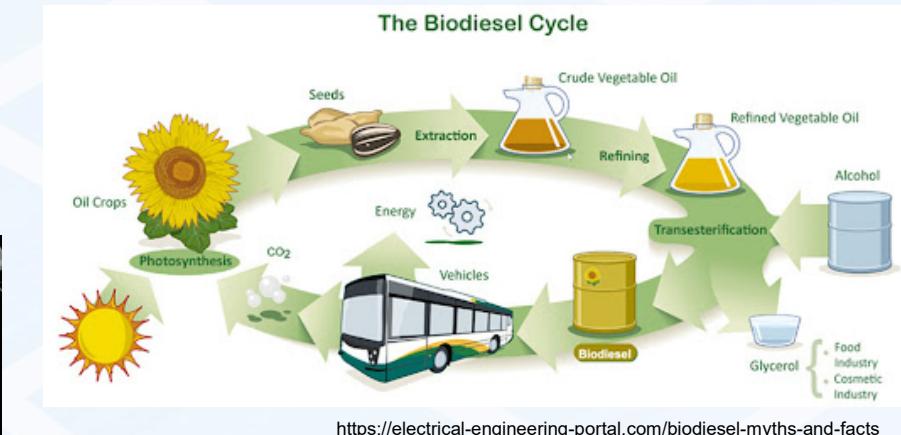

BIO-DIESEL

HYDROGEN

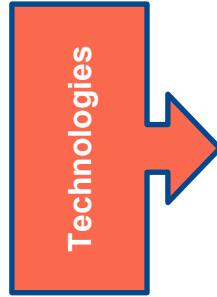

AQUEOUS PHASE
REFORMING

Bio-Refinery concept

Added value products from wastes

Raw materials

- ✓ Black liquor
- ✓ Pulp and paper industry wastes

Bio-Refinery concept

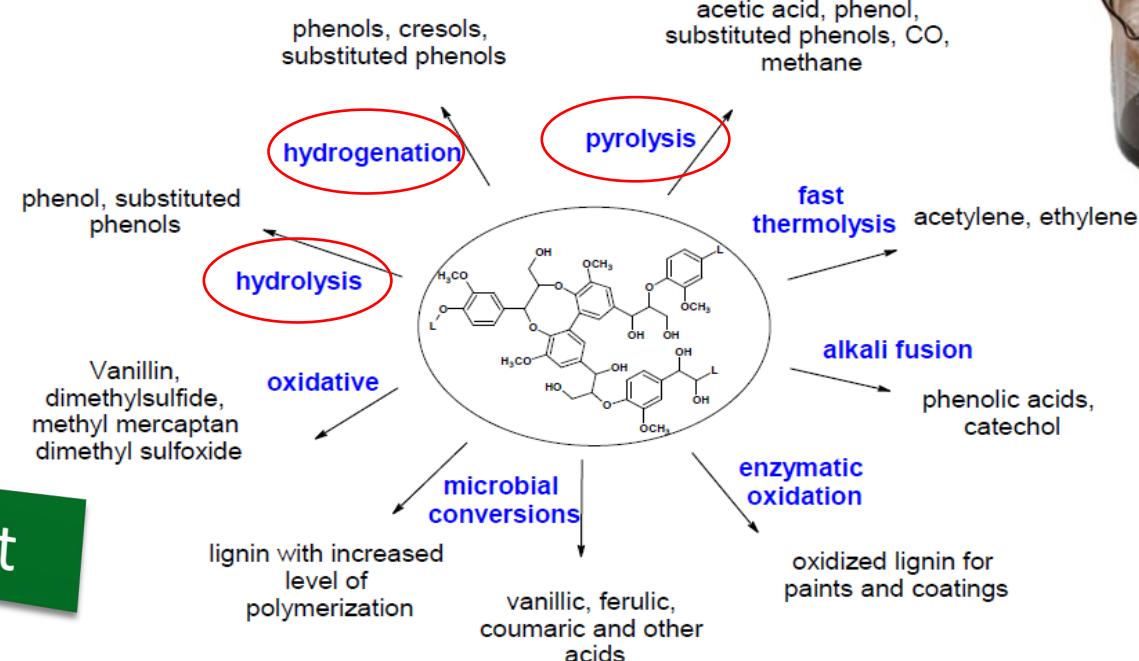

PYROLYSIS

- Lignine
- Bio-oils

GASIFICATION

TRANS-ESTERIFICATION

COMBUSTION

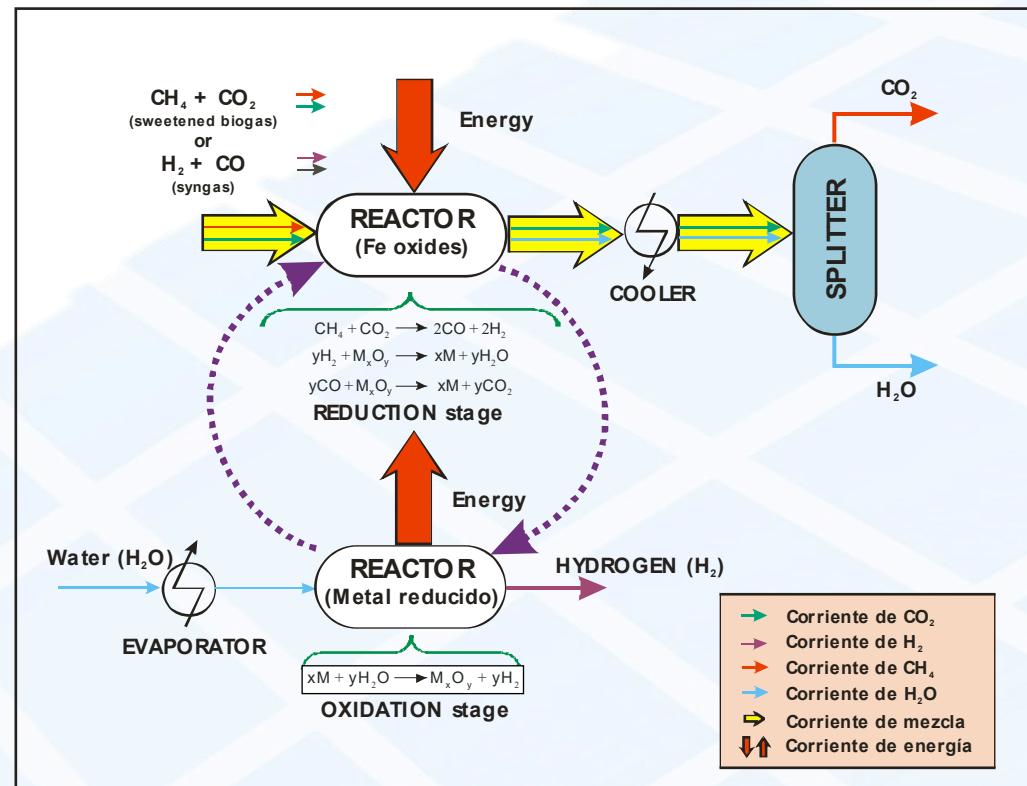

Catalysis and Reactor
Engineering Group

Technologies

STEAM IRON - CHEMICAL LOOPING

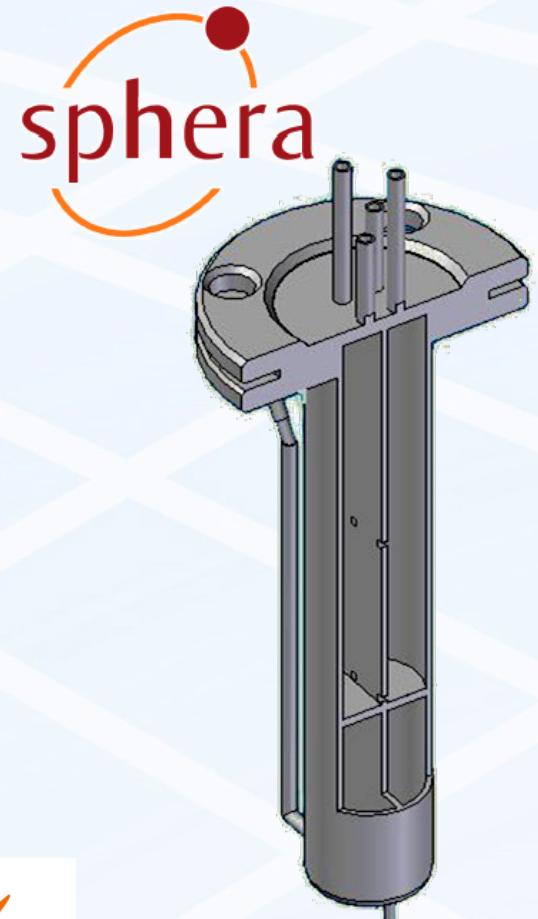

Raw materials

- ✓ Biogas
- ✓ Bioil
- ✓ Syngas streams
- ✓ Natural gas cracking exhaust
- ✓ ... reducing streams

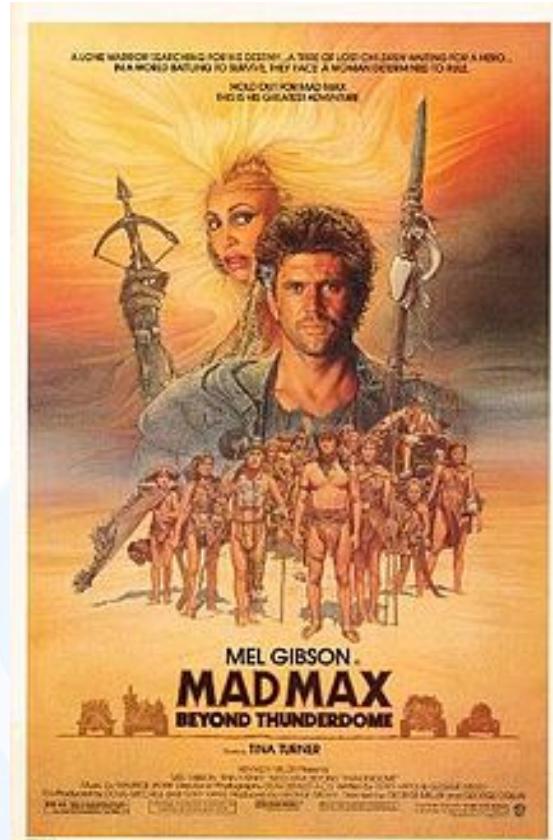

- High purity H₂ (>99.99 %)
- CO₂ sequestration
- Auto-thermal

Naturgy

Inter-Connected Fluidized
Bed Reactor (ICFBR)

Biogas upgrading/exploitation

"Mad Max beyond Thunderdome"

- Action movie of **1985**
- Australian post-apocalyptic film
- Directed by George Miller and George Ogilvie,
- Starring **Mel Gibson** and **Tina Turner**

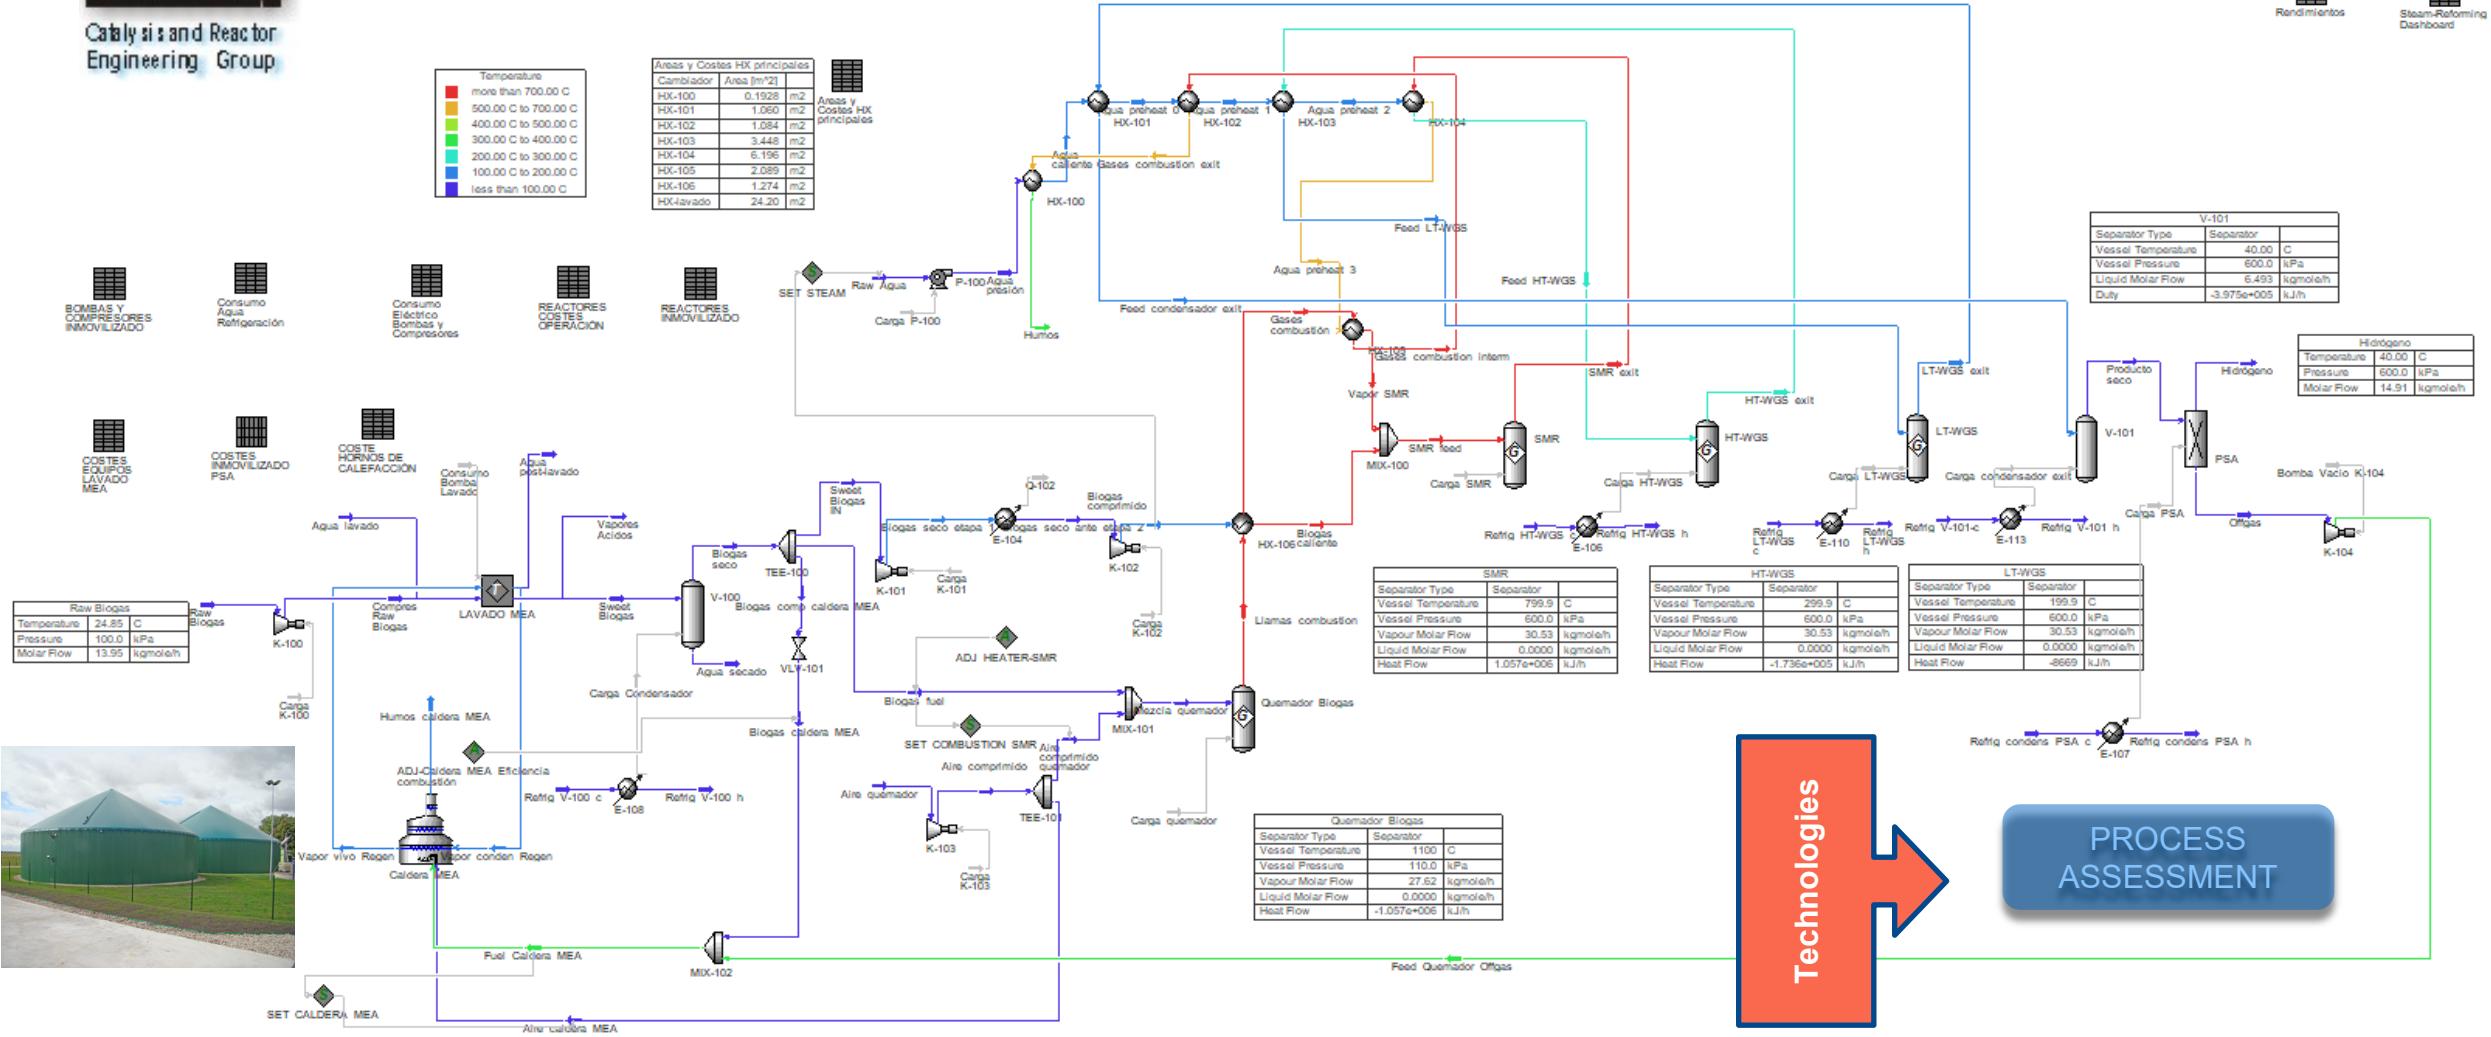

After an apocalyptic war, traditional energy sources have run out. (post peak-oil premonition?)

"...In Bartertown, electricity, vehicles, functioning technology are made possible by a crude methane refinery, fueled by pig feces..."

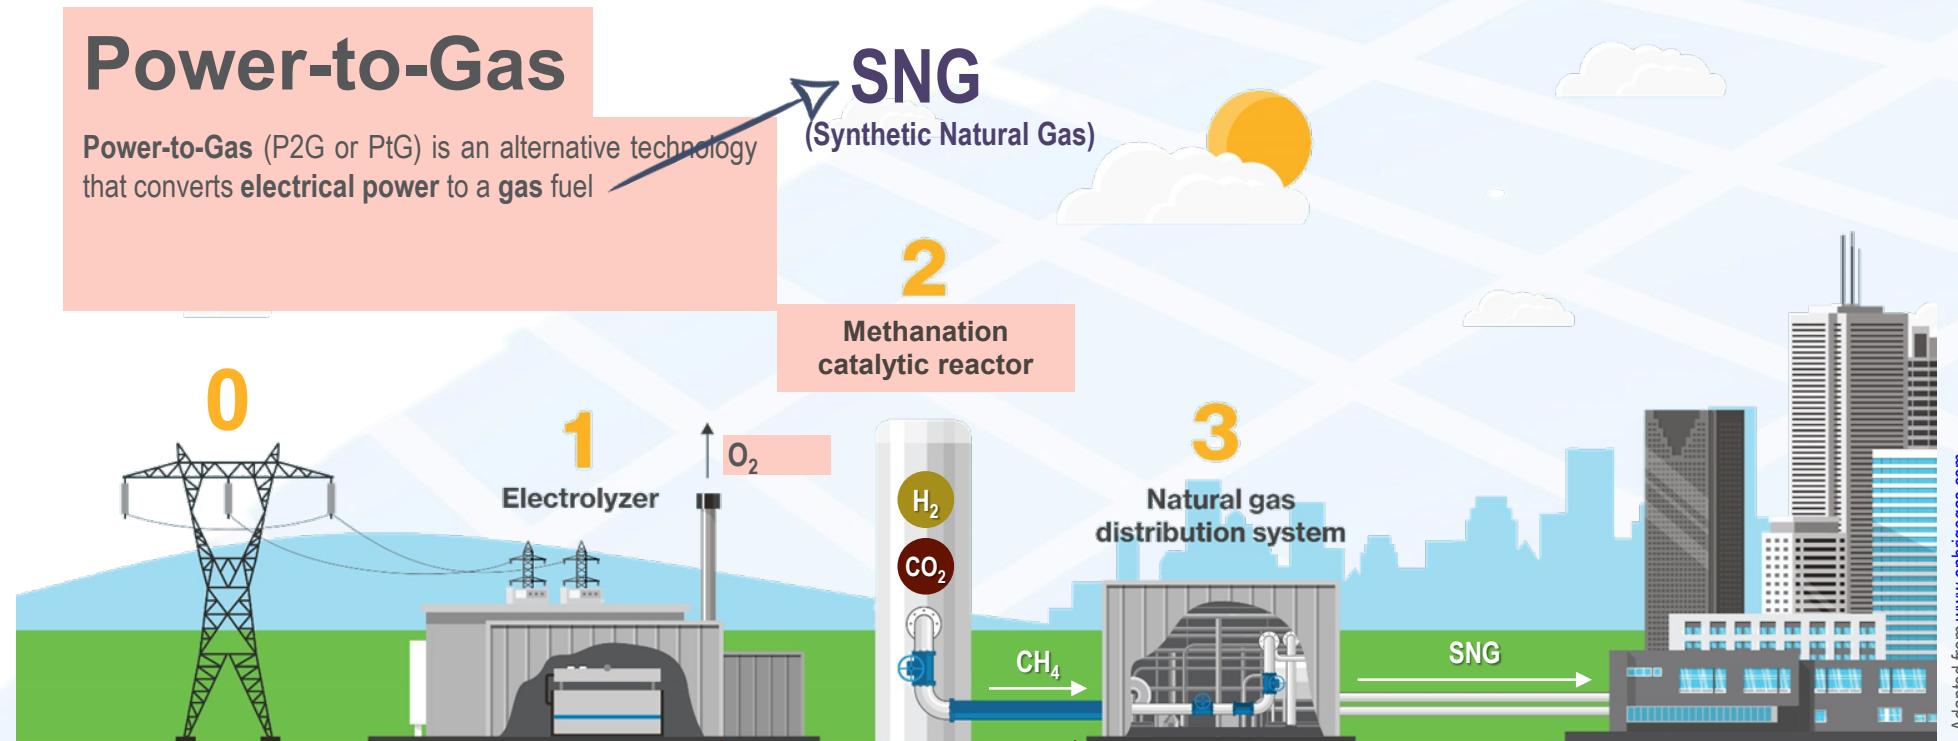

Biogas upgrading/exploitation

Catalysis and Reactor
Engineering Group

e-Fuels: Power to Gas

Technologies

METHANATION

Wind or solar farm produces more energy than needed due to low demand

Excess electricity generated is funnelled into electrolyzers that split water into H₂ and O₂

H₂ produced is combined with CO₂ (biogas) and converted to CH₄ (*Sabatier* reaction)

CH₄ is injected directly into the existing gas network (controlling its composition) and mixed with natural gas as a form of indirect energy storage

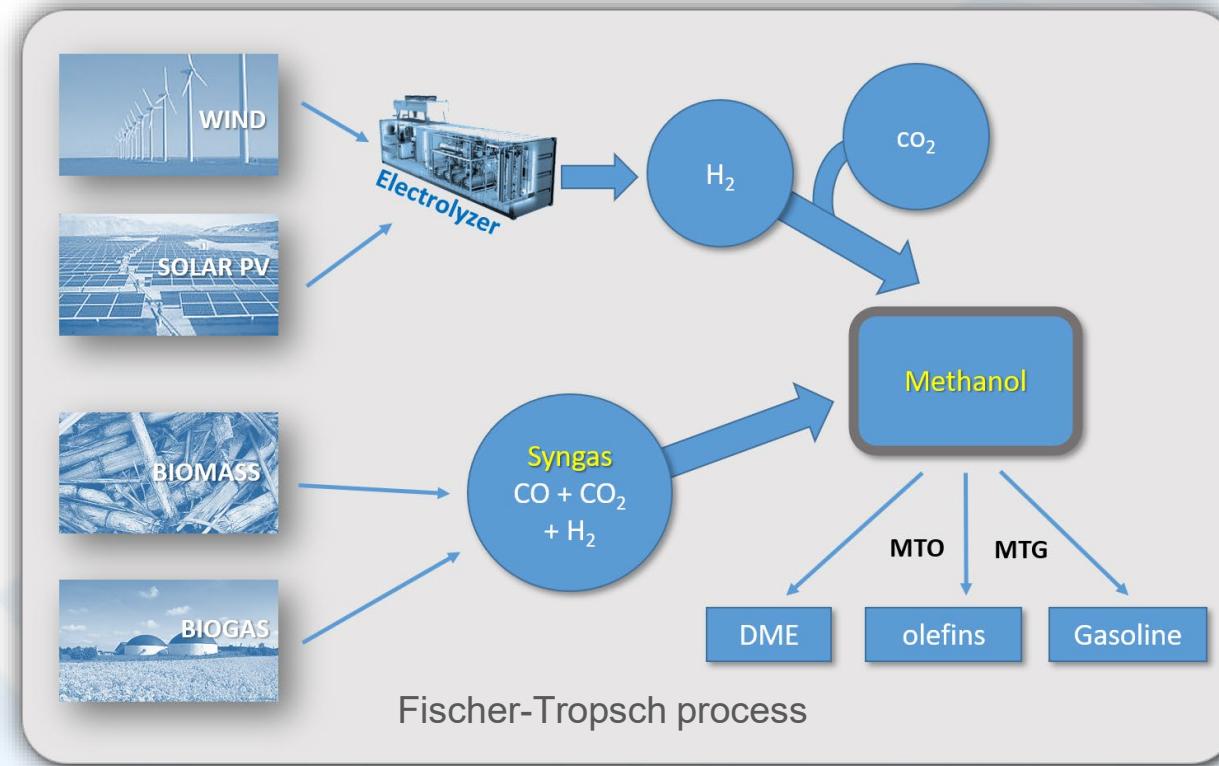

Adapted from www.enbigenes.com

e-Fuels: Power to Liquids

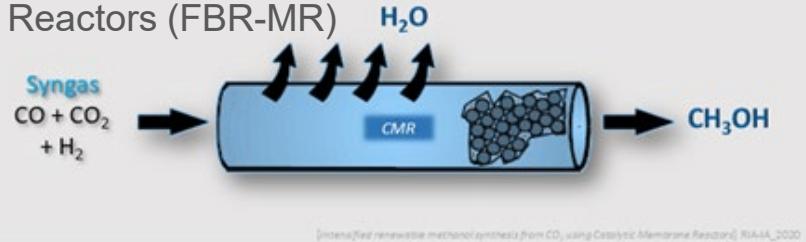

Raw materials

- ✓ Renewable energy
- ✓ Sequestered CO₂
- ✓ Gasification gases
- ✓ Syngas
- ✓ Biogas
- ✓ ...
